

Addendum to Neuropsychological Testing Criteria

For suspected mild cognitive impairment, or subjective complaints of memory in patients under the age of 65, an appropriate screening test as listed below, has been performed and indicates an abnormal result.

Instrument	Time (Min.)	Cut-off Score/ Total Score	Reference
Mini-mental state examination	7-10	=23-26/30	Folstein et al., 1975
Hopkins verbal learning test-total Recall	5	=14-18/36	Frank and Byrne, 2000
Memory impairment screen	4	=4/8	Buschke et al., 1999
Clock drawing test	1-3	Scoring methods vary	Royall et al., 1992
Cambridge cognitive examination	20	=80/107	Lolk et al., 2000
Modified mini-mental state examination	10-15	=77-86/100	McDowell et al., 1997
Community screening interview for dementia	30	Formula used	Hall et al., 1993
Montreal cognitive assessment	10	-25/30	Nasreddine et al., 2005
Memory orientation screening test	5	Formula used	Clionsky, 2010

- In reference to the above Instruments, one initial testing evaluation followed by one additional re-testing evaluation within a 12-month period by the same provider or group may be done without medical review
